AWS Microsoft Workload Migration Bundle

Build the right AWS solution for your needs

Organisations are increasingly realising that migrating Microsoft workloads – including mission-critical workloads – to the cloud is not just feasible, but necessary for business agility and growth.

Insight's Amazon Web Service (AWS) Microsoft Workload Migration Bundle helps you rapidly navigate the complexities of migration to AWS with a high degree of confidence. Our cloud experts use proven methodology, an agile approach that is tailored to your individual needs, and automated tools and templates to help you build a high-performing, secure AWS bedrock onto which you can migrate your Microsoft workloads.

Whether starting from scratch or moving from an existing public cloud, the services in our AWS Microsoft Workload Migration Bundle ensure you migrate successfully, freeing up your time and resources to focus on strategic IT initiatives.

Business Challenge

The cost, performance and efficiency benefits of AWS are well-recognised by today's organisations. But efforts to avoid migrating mission-critical applications to the cloud – based on largely unfounded concerns about the difficulties and risks – have resulted in disjointed migration approaches and point solutions, hindering growth and innovation.

A comprehensive strategy to move all Microsoft workloads to AWS can solve these problems and transform your business model, but few organisations have the time, resource or skillsets to manage the complexity and are held back by the risks of building the wrong AWS solution.

The challenge is to find the right people, with the right experience and specialist knowledge to enable you to build, test and migrate to a strong, resilient AWS infrastructure.
